

EST FAB Champions Knowledge Democratization Through Its Global Weekend Webinar Series 2026

In a world where technological change is reshaping every aspect of society, the greatest divide is no longer merely economic; it is increasingly a divide in access to knowledge. Artificial Intelligence, Quantum Computing, Blockchain, Space Technologies, Cybersecurity, and Digital Infrastructure are transforming industries at a pace unmatched in human history. Yet millions of young people, particularly in developing economies, remain disconnected from the global conversations that define these emerging technologies. Recognizing this challenge, EST FAB, the education technology (EdTech) vertical of EST Group, launched one of its most ambitious global knowledge initiatives, the EST FAB Weekend Webinar Series 2026.

Spearheaded by Dr. Sindhu Bhaskar, Chairman and Founder of EST Group, an enterprise based in the ecosystem of MIT and the Cambridge Innovation Center, Boston, this remarkable initiative commenced on 27 June 2026 and continues every Saturday and Sunday, concluding on 22 August 2026.

Entirely pro bono, the program embodies a simple yet powerful philosophy: knowledge should never be restricted by geography, financial capability, or institutional privilege. The webinar schedule spans every weekend during this period, bringing together international experts across a wide spectrum of emerging technologies. More than 1000 attendees have registered for the sessions from more than 35 global chapters and JV institutions of EST FAB.

EST FAB has long been committed to democratizing education through global chapters, international webinars, cross-border technology exchanges, internships, and youth engagement programs. The Weekend Webinar Series represents the culmination of that vision—a global classroom where internationally renowned experts voluntarily share their knowledge with students, researchers, entrepreneurs, professionals, and innovators from around the world. The initiative reflects EST FAB's broader mission of digital knowledge empowerment and youth development through open access to world-class expertise.

EST FAB has assembled an extraordinary lineup of global thought leaders, corporate executives, scientists, researchers, innovators, and industry practitioners who are actively shaping the future of technology.

The inaugural session was delivered by the internationally acclaimed Prof. Dr. Ingrid Vasiliu-Feltes, who set the intellectual tone for the entire series. Another globally respected speaker, Radhika Iyengar and Jorden Woods, facilitated "Enterprise Blockchain Has Arrived". Participants gained valuable insights into how decentralized technologies are becoming integral components of future digital economies.

Leadership and personal transformation were equally important themes within the program, led by Cathy Dimarchos. The series also explored the future of digital transformation through Bruce Armstrong Taylor.

Throughout the eight-week series, senior executives, researchers, professors, technology architects, cybersecurity specialists, AI practitioners, blockchain innovators, cloud experts, healthcare professionals, enterprise architects, and digital transformation leaders from leading corporations and institutions across the United States and other countries have voluntarily contributed their expertise. Collectively, the webinar series comprises more than sixty specialized sessions covering Quantum Computing, Artificial Intelligence, Agentic AI, Generative AI, Blockchain, Cybersecurity, Cloud Computing, Enterprise Architecture, Digital Manufacturing, Healthcare Innovation, Intelligent Automation, SAP Transformation, Data Engineering, Software Engineering, DevOps, Digital Leadership, Sustainability, Robotics, and emerging digital business models.

The educational philosophy behind EST FAB is equally remarkable. Rather than promoting isolated technical skills, the webinar series recognizes that the future belongs to interdisciplinary thinkers. Tomorrow's financial professionals must understand artificial intelligence; engineers must appreciate cybersecurity; healthcare specialists must leverage machine learning; business leaders must comprehend blockchain, digital identity, cloud platforms, and intelligent automation. Accordingly, every session encourages participants to understand technology as an interconnected ecosystem rather than as isolated disciplines.

Equally significant is the initiative's commitment to inclusivity. Every lecture is delivered free of cost, removing financial barriers that often prevent students from accessing world-class executive education.

Participants engage directly with internationally recognized experts whose

insights are normally available only through prestigious conferences, specialized executive programs, or global industry forums. EST FAB transforms this exclusive knowledge into a shared public resource, reinforcing its belief that education should be a catalyst for social mobility rather than a privilege reserved for a few.

The EST FAB (<https://www.estfab.com>) Weekend Webinar Series also exemplifies a broader philosophy of responsible corporate citizenship. Instead of measuring social responsibility solely through financial contributions, EST Group demonstrates that sharing intellectual capital can produce an even greater societal impact. Every speaker contributes not merely information but decades of professional experience, enabling students to understand emerging technologies from those actively shaping their development.

Under the visionary leadership of Dr. Sindhu Bhaskar, EST FAB has demonstrated that meaningful transformation begins with education, collaboration, and the democratization of knowledge. It stands as a powerful example of how industry leadership, global expertise, and a commitment to public service can come together to prepare the next generation of innovators.
